Turkish / Native

Mustafa Tutus
UI/UX-Frontend Developer

Hi, I'm Tutus, a frontend developer who shifted to software development after graduating in Electrical and Electronics Engineering. I specialize in creating user-friendly and high-performance interfaces using modern technologies like JavaScript, React, and Next.js. I always strive for design consistency and efficiency by leveraging tools like Tailwind and SASS. Additionally, I'm expanding my backend skills in Java and Node.js, and I focus on delivering exceptional user experiences through Figma in my UI/UX design work. I'm passionate about attention to detail in every project and continuously improving my skills throughout my career.

Experiences and Projects

Biberon App [Figma, Canva]   **August 2024 - Present**
